Devo Log Management

Pervasive, Real-Time Intelligence for Extended Enterprises

Log data is growing exponentially as enterprises extend out from traditional IT and line-of-business systems to the IoT. While there's a lot of potential value in that data, most organizations lack a real-time, centralized view of it.

Devo's Data Operations Platform liberates data from disparate systems so businesses can better understand their operations, security risks, and business opportunities. Instead of indexing data at ingest, Devo ingests raw data to deliver continuous intelligence across both operational and streaming data, all in real time.

Break Down Unnecessary Barriers

Today's businesses need instant access to critical information regardless of where it resides. Devo provides a unified view of infrastructure and business applications across data centers, clouds and the edge so you know what's happening in your network, as it happens. That data can be combined with historical data to understand risks and opportunities in greater depth. With Devo, you can remediate security incidents faster, reduce customer churn, and improve your ability to compete at Agile speed.

Devo also facilitates informed discussions among IT, operations, and the business through role-specific views that can be customized to meet your company's needs. The collaborative capabilities enable single- or cross-functional teams to identify, troubleshoot and remediate issues faster than ever before. In addition, Devo stores the history of remediation efforts, so if a similar issue arises in the future, existing team members and even new hires can accelerate its resolution quickly, without unnecessary guesswork.

Devo also helps enterprise DevOps teams achieve their goal of continuous improvement through a better, more comprehensive understanding of the production environment.

Simplify Regulatory Compliance

Audits require timely answers to tough questions. With Devo, you can programmatically manage the retention period of different types of data, which allows you to surface what you need faster and more cost-effectively. Devo also enables you to run complex queries across multiple data sources so you can surface the information you need regardless of where it resides.

Slice, Dice

Different types of questions require different types of answers.

Devo allows you to find the correlations, patterns, and anti-patterns occurring now in business operations, technology infrastructure, and potential security breaches.

Using our industry-specific libraries, you can take advantage of customizations that reflect your IT infrastructure, whether it includes industrial-control systems (ICS), point-of-sales (POS) systems or other use-case-specific equipment, systems, or software.

Fortune 1000 companies take advantage of our industry-specific libraries to protect their businesses and to compete more effectively.

Predict

What if you could manage potential threats before they become issues? Devo allows you to do just that.

By combining continuous monitoring and multi-client alerting, Devo ensures you can reduce the potential costs and impacts of anomalies and out-of-bounds conditions. Travel back to when a trend began or fast-forward to potential outcomes based on different variables. You can also drill down into an issue to identify its root cause. With Devo, you maintain unprecedented control of your environment at all times.

Accelerate Results, Reduce Costs

As the only true real-time log management platform, Devo surfaces information an order of magnitude faster than competing solutions because we don't add indexing overhead on ingest.

Our smaller footprint helps too. Other solutions can require hundreds of servers to handle enterprise-scale data. We can deliver faster, more comprehensive, and more cost-effective results using a mere fraction of the hardware.

Contact us today to discover what Devo can do for you. We're pretty sure after seeing a demo, you won't view log management the same way again, ever.

ABOUT DEVO

Devo delivers real-time operational and business insights from analytics on streaming and historical data to operations, IT, security and business teams at the world's largest organizations. The Devo Data Operations Platform collects, enhances and analyzes machine, business and operational data, at scale, from across the enterprise.
